PORTFOLIO CASE STUDY · INSURANCE ANALYTICS

Why customers leave, and where claims stall

A Power BI analysis of a fictional Nigerian composite insurer: 3,050 policies, 2,840 customers, 270 claims and 267 customer messages, as at 30 September 2026.

THE BRIEF

How is the business performing, why are customers leaving, and where are claims slow?

Folakemi Olanrewaju · Data Analyst

All data is synthetic, invented for practice

BUSINESS OVERVIEW

Claims take half of general premium; one in five new life customers stop paying within a year

N1.41bn

Premium received

Life N1.20bn and general N0.21bn, counting paid instalments only.

48.8%

General loss ratio

Claims paid divided by premium received. Motor Comprehensive is highest, at 50.5%.

80.0%

13th-month persistency

Share of new life policies still paying a year later. One in five has stopped.

61.1%

Renewal rate

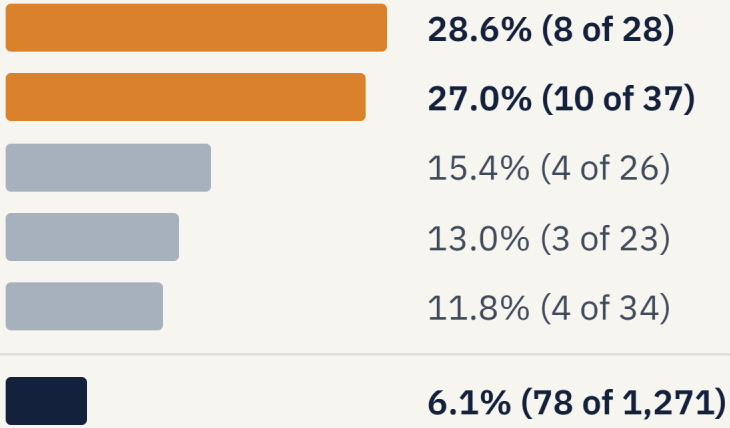

General policies renewed at expiry. Digital sales renew best (80%), brokers worst (45%).

Scope: 3,050 policies sold January 2024 to June 2026 (1,800 life, 1,250 general), 2,840 customers after removing duplicates, 270 claims and 267 customer messages.

FINDING 1 · EARLY SURRENDERS

Two Ibadan agents sold 5% of savings policies but account for 23% of early surrenders

Early surrender rate by agent: the top five, against all savings policies

EARLY WARNING

3.7×

Savings customers who complained surrendered at 17.9%, against 4.8% for those who did not.

What to do

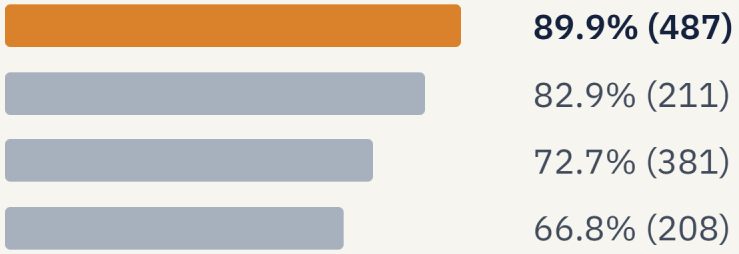

- Review and retrain the two agents
- Welcome call within 30 days of a sale
- Retention call within 7 days of a complaint

Track: early surrender rate by agent, monthly.

Early surrender: a savings policy surrendered within 24 months of sale.

Direct debit keeps customers paying, and claims stall at three points

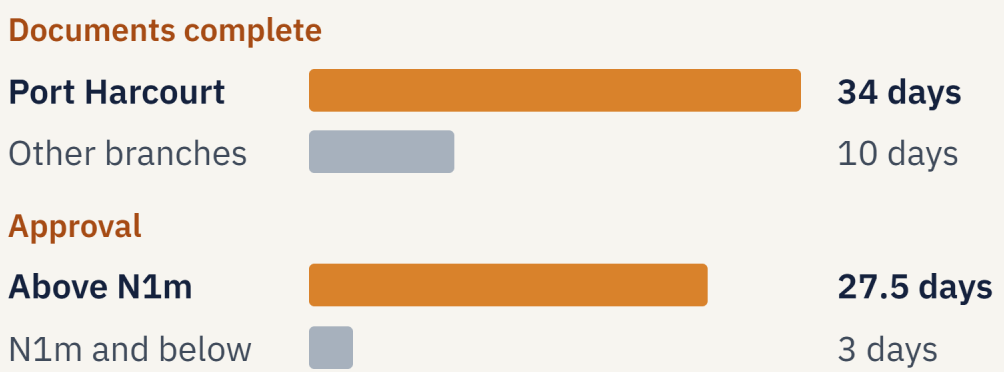

13th-month persistency by payment method

Do: make direct debit the default at sign-up, and remind manual payers before each due date.

Track: 13th-month persistency by payment method.

Median days a claim waits, by stage

Payment: 240 of 245 paid claims were paid on a Thursday.

Do: a document checklist in Port Harcourt, a faster approval route for large claims, and daily payment runs.

Claim medians exclude missing and impossible dates. Bracketed figures are policy counts.

DATA QUALITY AND NEXT STEPS

Five data problems were found and fixed before any number was reported

Problem	Records	What I did
Same customer entered twice	25 records	Mapped each duplicate to one master customer ID
Paid claims with no documents date	10 claims	Kept in money totals; excluded from turnaround time
Claims paid before they were reported	6 claims	Excluded from turnaround time; IDs listed for correction
Policies linked to a missing agent	10 policies	Assigned to an “Unknown” agent so they stay visible
One branch spelled four ways	3 agents	Standardised to “Port Harcourt”
